

Dr. Spa, MD
Hot Tub Specialist

Mainely Tubs presents:

Dr. Spa Support,

Dr Spa here! Heard you wanted some heat in your tub... after all, it is a HOT tub. Let's get it up and going again for you.

Please identify your spa's heater (located in the motor compartment) from the pictures to the right to determine which trouble shooting process to follow.

If your heater HAS a reset button (pictures 1 or 2), follow these instructions:

1. Unplug the spa (110v), or turn off both breakers (220v).
2. **REMOVE the filters** from the spa and **do not return them to spa until water has heated.**
3. Remove any debris from the filter compartment.
4. Open the equipment compartment.
5. Reset the Heating Element (refer to diagram of heater to locate reset button). Be sure to use something other than your finger to reset the button (a Philips head screwdriver, spa door screw or golf tee are suggested.)
6. Close the equipment compartment door.
7. Plug the spa in (110v), or turn both breakers on (220v).
8. Check the spa for heat after 24 hours (110v) or 12 hours (220v).
9. If the spa is still not heating, service is required.

If the spa is still not heating service is required – call 207-883-9193 or email kbevan@mainelytubs.com

If your heater DOES NOT HAVE a reset button (picture 3 or 4), follow these instructions:

1. Unplug the spa (110v), or turn off both breakers (220v).
2. **REMOVE the filters** from the spa and **do not return them to spa until water has heated.**
3. Remove any debris from the filter compartment.
4. Plug the spa in (110v) or turn both breakers on (220v).
5. Check the spa for heat after 24 hours (110v), or 12 hours (220v).
6. If the spa is still not heating, service is required.

If the spa is still not heating service is required – call 207-883-9193 or email kbevan@mainelytubs.com
